Observer training Workshop, September 1<sup>st</sup> 2021

# Drifting FAD related data in Gen-5

## Biodegradable FADs, FAD identification number

---

**Lauriane Escalle**

Fisheries scientist, purse seine and dFAD dynamics

Stock Assessment and Modelling (OFP – SPC)

## OUTLINE

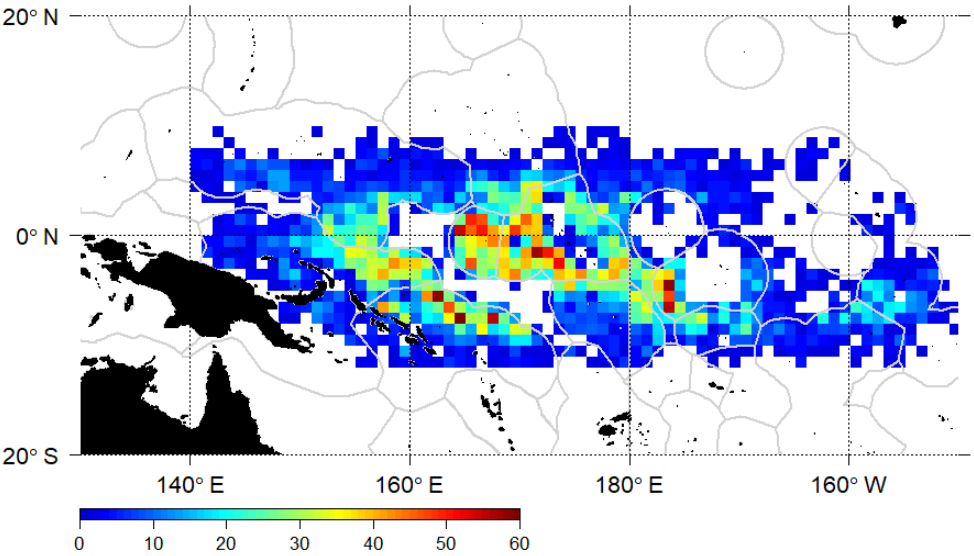

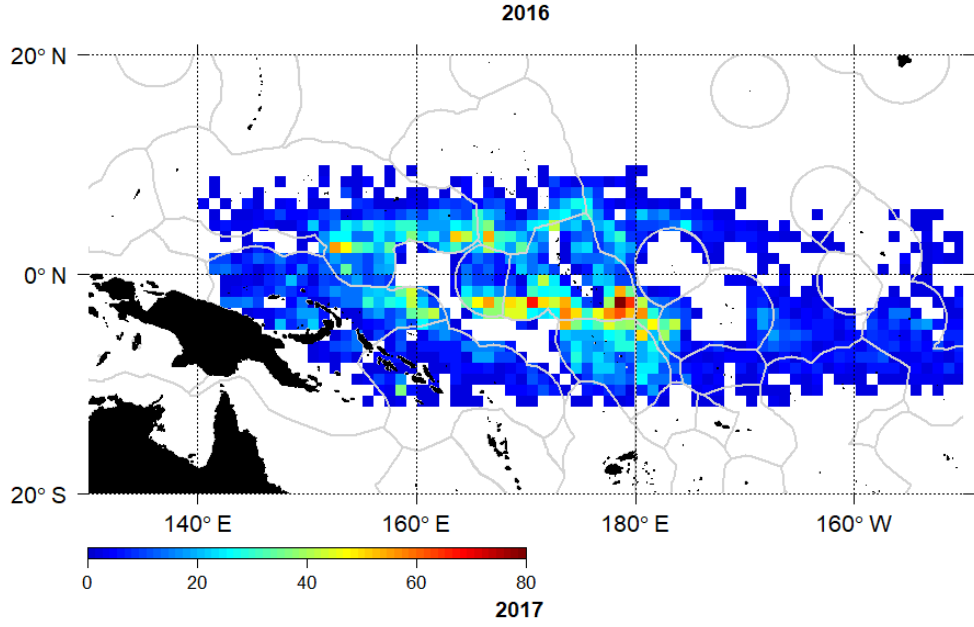

- FADs in the WCPO
- Management measures linked to FADs.  
Important information to record
- What is a non-entangling FAD / What is a biodegradable FAD
- How to record information on low/non-entangling FAD & biodegradable FAD ?
- Satellite buoy serial number

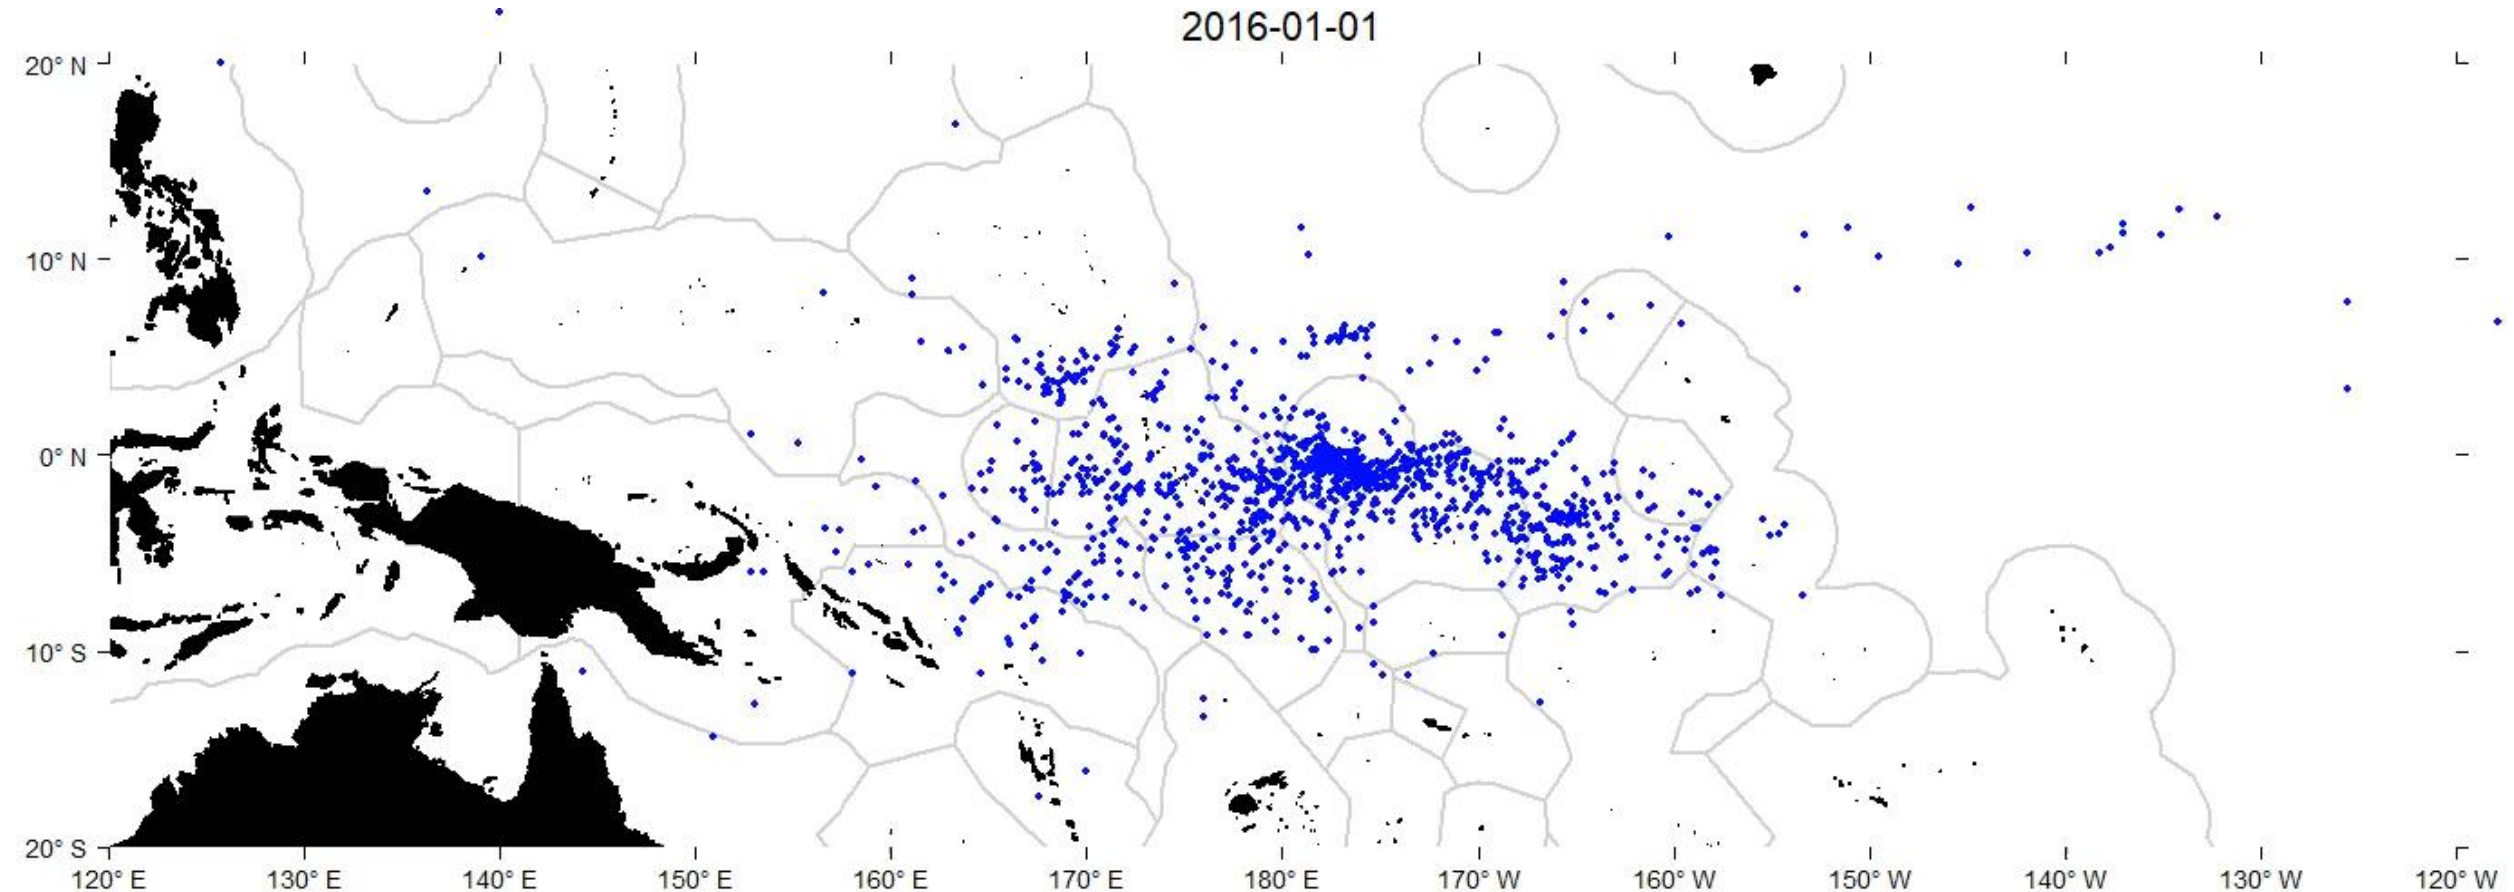

# WCPO purse seine fishery

## dFAD sets

- Parties to the Nauru agreement (PNA) **FAD tracking programme initiated in 2016**

**Objectives:** Better understanding of FAD dynamics and fleet behavior to inform management option

**Data:** Access date/time & position of transmissions from satellite buoys deployed on dFADs from each purse seiners fishing in PNA waters

### Impact of FADs on tuna stocks and on the ecosystem:

- High capture of juvenile bigeye tuna on FAD associated sets
- Higher bycatch rates
- Entanglement of species of special interest (shark, rays)
- dFAD loss: marine pollution, beaching

### WCPFC management measures regarding FADs (CMM-2018-01)

- **3 months FAD closure**
- **Limit in the number of active satellite buoy on dFADs monitored: 350 at any given time (2018)**
- **Use of low entanglement risk FADs (January 2020)**
- **Use of non-plastic and biodegradable materials in the construction of FADs is encouraged**

### **Instrumented Buoys**

**(WCPFC CMM 2018-01)**

23. A flag CCM shall ensure that each of its purse seine vessels shall have deployed at sea, at any one time, no more than 350 drifting Fish Aggregating Devices (FADs) with activated instrumented buoys. An instrumented buoy is defined as a buoy with a clearly marked reference number allowing its identification and equipped with a satellite tracking system to monitor its position. The buoy shall be activated exclusively on board the vessel. A flag CCM shall ensure that its vessels operating in the waters of a coastal State comply with the laws of that coastal State relating to FAD management, including FAD tracking.

### **Non-entangling FADs** (WCPFC CMM 2018-01) **JANUARY 2020**

1. To reduce the risk of entanglement of sharks, sea turtles or any other species, as from 1st January 2020, CCMs shall ensure that the design and construction of any FAD to be deployed in, or that drifts into, the WCPFC Convention Area shall comply with the following specifications:
  - The floating or raft part (flat or rolled structure) of the FAD can be covered or not. To the extent possible the use of mesh net should be avoided. If the FAD is covered with mesh net, it must have a stretched mesh size less than 7 cm (2.5 inches) and the mesh net must be well wrapped around the whole raft so that there is no netting hanging below the FAD when it is deployed.
  - The design of the underwater or hanging part (tail) of the FAD should avoid the use of mesh net. If mesh net is used, it must have a stretched mesh size of less than 7 cm (2.5 inches) or tied tightly in bundles or “sausages” with enough weight at the end to keep the netting taut down in the water column. Alternatively, a single weighted panel (less than 7 cm (2.5 inches) stretched mesh size net or solid sheet such as canvas or nylon) can be used.
2. To reduce the amount of synthetic marine debris, the use of natural or biodegradable materials for FADs should be promoted. The use of non-plastic and biodegradable materials in the construction of FADs is encouraged.

## What is a biodegradable or non-entangling FAD ?

### BIODEGRADABLE NON-ENTANGLING FADS:

MANDATORY

Encouraged

Trials

HIGHEST ENTANGLEMENT RISK FADs:

LOWER ENTANGLEMENT RISK FADs:

NON-ENTANGLING FADs:

BIODEGRADABLE NON-ENTANGLING FADs:

HIGHEST RISK

LOWEST RISK

MANDATORY

Encouraged

HIGHEST ENTANGLEMENT RISK FADs:

- Constructed with any netting materials, including old purse seine netting, used to cover rafts or suspended beneath in open panels
- These DFADs are known to cause entanglements with turtles and sharks

LOWER ENTANGLEMENT RISK FADs:

NON-ENTANGLING FADs:

BIODEGRADABLE NON-ENTANGLING FADs:

Trials

HIGHEST RISK

LOWEST RISK

## HIGH Entanglement Risk FADs

### RAFT

- Covered with large mesh netting (e.g. > 2.5-inch mesh).\*
- If mesh size is larger than 2.5 inches (both in the upper or submerged part), it is high entanglement, whether the net is tightly tied or covered by canvas or tarpaulin.

### TAIL

- Submerged part of the FAD constructed with open panels of large mesh netting (> 2.5-inch mesh).

\*Accounting for mesh sizes available in the market, 2.5 inch (7 cm) mesh size offers the lowest likelihood of entanglements across species and body parts.

**These FADs are  
known to cause  
entanglements  
with turtles and  
sharks.**

## → Examples

### Raft

The surface structure should not be covered with netting or meshed materials (to reduce entanglement of turtles).

Bio-degradable

Construct with bamboo, balsa wood or other natural materials that degrade without causing impact on the ecosystem.

Use of plastic buoys and containers for flotation should be reduced as much as possible; for instance, reduce the weight and volume of the FAD structure.

### Tail

Only FADs constructed without netting can completely eliminate the entanglement of turtles, sharks and finfish species.

Bio-degradable

Use only natural and/or biodegradable materials—cotton ropes and canvas, manila hemp, sisal, coconut fiber—so that they degrade without causing ecosystem impact.

## → Examples

### Raft

The surface structure materials (to reduce entanglement)

Bio-degradable

Construct with materials that degrade without harming the environment

Use of plastic buoys as much as possible; the FAD structure.

### Biodegradable FAD trials

- WCPFC/ SPC led project (2021 - start when possible)
- Fleet /companies initiatives

Different designs exist: These are examples.

### Tail

Only FADs constructed without netting can completely eliminate the entanglement of turtles, sharks and finfish species.

Bio-degradable

Use only natural and/or biodegradable materials—cotton ropes and canvas, manila hemp, sisal, coconut fiber—so that they degrade without causing ecosystem impact.

How to record it in Gen-5 ???

Biodegradable FAD

Different designs exist:  
These are examples.

Encouraged

NON-Entangling FADs

RAFT

- Not constructed or covered with canvas, tarpaulin or shade clothes.

TAIL

- Subsurface structure is made with ropes, canvas or nylon sheets, or other non-entangling materials.

More detail on the previous page.

No netting is used in any components (raft and tail)

These FADs are expected to have no risk of causing entanglement.

MANDATORY

LOWER Entanglement Risk FADs

RAFT

- Use only small mesh netting (< 2.5 inch / 7 cm stretched mesh) if covering with net (both upper and submerged parts).
- If small mesh netting is used as cover, it is tightly wrapped, with no loose netting hanging from the raft.

TAIL

- If net is used as submerged tail, could be of any mesh size if tightly tied into sausage-like bundles.
- If open panel netting is used, only small mesh size (< 2.5 inch [7 cm] stretched mesh) can be used, but weight the panel to keep it taut.

Despite using netting, these design elements reduce the risk of entanglement events.

HIGH Entanglement Risk FADs

RAFT

- Covered with large mesh netting (e.g. > 2.5-inch mesh).\*
- If mesh size is larger than 2.5 inches (both in the upper or submerged part), it is high entanglement, whether the net is tightly tied or covered by canvas or tarpaulin.

TAIL

- Submerged part of the FAD constructed with open panels of large mesh netting (> 2.5-inch mesh).

\*Accounting for mesh sizes available in the market, 2.5 inch (7 cm) mesh size offers the lowest likelihood of entanglements across species and body parts.

These FADs are known to cause entanglements with turtles and sharks.

## Satellite Buoy serial number

Why ? What? Where? How to record ?

### WHY ?

- Various studies to better understand FAD use, effort, follow FAD life history, ecosystem impacts, etc.
- Match with FAD trajectories in the PNA FAD tracking programme
- CMM: number of active buoys monitored per vessel

FAD/PAYAO and FLOATING OBJECTS  
INFORMATION RECORD

Form GEN-5

REVISED 2018

OBSERVER NAME:				VESSEL NAME:				OBSERVER TRIP ID NUMBER:				PAGE OF											
Date (from PS-2)		Time		Set No.		Object number		Origin of FAD		Deployment date		latitude dd°mm.mmm' N		and longitude ddd°mm.mmm' E		FAD as found		Beacon/ FAD lifted		FAD as left		Comments / Change details

or Ze0123456789

P1234NF

123456

Observers should:

Carefully copy the buoys serial number exactly as found on the buoy

Not to do :

- Forget the prefix (DSL+ ; ISL+ ; M3I, T7+ etc.)
- Add other markings painted on the buoy, e.g. vessel name

Buoy serial number	Beacon/FAD ID markings

Any other marking painted on the beacon, or marking on the FAD

A number, a vessel name or an abbreviation of a vessel name

### Satellite buoy serial number : what are they and how to find them
